

## Unit No. 2

### Logarithms

#### Exercise No. 2.3

#### Question No. 1

**Find the Characteristic of the Given Numbers:**

The characteristic of a logarithm is the whole number part when we express a number in scientific notation.

- If the number is greater than 1, the characteristic is one less than the number of digits in the whole number part.
- If the number is between 0 and 1, the characteristic is negative and found using the position of the first significant digit.

(i) 5287

**Solution:**

5287

- In scientific notation:  $5.287 \times 10^3$
- The characteristic is 3.

(ii) 59.28

**Solution:**

59.28

- In scientific notation:  $5.928 \times 10^1$
- The characteristic is 1.

(iii) 0.0567

**Solution:**

0.0567

- In scientific notation:  $5.67 \times 10^{-2}$
- The characteristic is  $-2$ .

(iv) 234.7

**Solution:**

234.7

- In scientific notation:  $2.347 \times 10^2$
- The characteristic is 2.

(v) 0.000049

**Solution:**

0.000049

- In scientific notation:  $4.9 \times 10^{-5}$
- The characteristic is  $-5$ .

(vi) 145000

**Solution:**

145000

- In scientific notation:  $1.45 \times 10^5$
- The characteristic is 5.

## Question No. 2

**Find the Logarithm of the Given Numbers:**

**Logarithm of a number (log N) is given by:**

$$\log N = \text{Characteristic} + \text{Mantissa}$$

(i)  $\log 43$

**Solution:**

$\log 43$

$$43 = 4.3 \times 10^1$$

Characteristic = 1

Using log tables:  $\log (4.3) \approx 0.6335$

$$\text{Log } 43 = 1 + 0.6335$$

$$= 1.6335$$

(ii)  $\log 579$

**Solution:**

$\log 579$

$$579 = 5.79 \times 10^2$$

Characteristic = 2

Using log tables:  $\log (5.79) \approx 0.7627$

$$\text{Log } 579 = 2 + 0.7627$$

$$= 2.7627$$

**(iii)  $\log 1.982$**

**Solution:**

$$\log 1.982$$

$$1.982 = 1.982 \times 10^0$$

$$\text{Characteristic} = 0$$

$$\text{Using log tables: } \log (1.982) \approx 0.2971$$

$$\text{Log } 1.982 = 0 + 0.2971$$

$$= 0.2971$$

**(iv)  $\log 0.0876$**

**Solution:**

$$\log 0.0876$$

$$0.0876 = 8.76 \times 10^{-2}$$

$$\text{Characteristic} = -2$$

$$\text{Using log tables: } \log (8.76) \approx 0.9425$$

$$\text{Log } 0.0876 = -2 + 0.9425$$

$$= -2 + 0.9425$$

$$= -1.0575$$

**(v)  $\log 0.047$**

**Solution:**

$$\log 0.047$$

$$0.047 = 4.7 \times 10^{-2}$$

$$\text{Characteristic} = -2$$

$$\text{Using log tables: } \log (4.7) \approx 0.6721$$

$$\text{Log } 0.047 = -2 + 0.6721$$

$$= -1.3279$$

**(vi)  $\log 0.000354$**

**Solution:**

$$\log 0.000354$$

$$0.000354 = 3.54 \times 10^{-4}$$

$$\text{Characteristic} = -4$$

$$\text{Using log tables: } \log(3.54) \approx 0.5490$$

$$\text{Log } 0.000354 = -4 + 0.5490$$

$$= -3.4510$$

### Question No. 3

If  $\log 3.177 = 0.5019$ , then find:

**Given:**

$$\text{Log } 3.177 = 0.5019$$

**(i)  $\log 3177$**

**Solution:**

$$\log 3177$$

$$= \log(3.177 \times 10^3)$$

$$= \log 3.177 + 3 \log 10$$

$$= 0.5019 + 3$$

$$= 3.5019$$

**(ii)  $\log 31.77$**

**Solution:**

$$\text{Log } 31.77$$

$$= \log(3.177 \times 10^1)$$

$$= \log 3.177 + 1 \log 10$$

$$= 0.5019 + 1$$

$$= 1.5019$$

**(iii)  $\log 0.03177$**

**Solution:**

$$\text{Log } 0.03177$$

$$= \log(3.177 \times 10^{-2})$$

$$= \log 3.177 + (-2) \log 10$$

$$= 0.5019 - 2$$

$$= -1.4981$$

## Question No. 4

**Find the Value of x:**

**(i)  $\log x = 0.0065$**

**Solution:**

$$\log x = 0.0065$$

Taking antilog:

$$x = \text{antilog } 0.0065$$

$$x = 1.015$$

**(ii)  $\log x = 1.192$**

**Solution:**

$$\log x = 1.192$$

Taking antilog:

$$x = \text{antilog } 1.192$$

$$x = 15.56$$

**(iii)  $\log x = -3.434$**

**Solution:**

$$\log x = -3.434$$

Taking antilog:

$$x = \text{antilog } -3.434:$$

$$x = 0.0003681$$

**(iv)  $\log x = -1.5726$**

**Solution:**

$$\log x = -1.5726$$

Taking antilog:

$$x = \text{antilog } -1.5726:$$

$$x = 0.02675$$

**(v)  $\log x = 4.3561$**

**Solution:**

$$\log x = 4.3561$$

Taking antilog:

$$x = \text{antilog } 4.3561:$$

$$x = 22700$$

(vi)  $\log x = -2.0184$

**Solution:**

$$\log x = -2.0184$$

$$\log x = -2.0184$$

Taking antilog:

$$x = \text{antilog } -2.0184$$

$$x = 0.009585$$
